WHAT IS IT

LIFE for **“PROBIO NUTRITION”**.

Mix of microencapsulated acids with modulated release to promote intestinal health. Ideal in fast transit rations to protect against gastro-intestinal disorders and contain periculous dysbiosis with development of clostridia.

BENEFITS PROVIDED

- The modulated acidification of the gastroenteric tract, favors the intestinal flora, creating at the same time an antagonistic environment for the main pathogenic bacteria.
- Contains intestinal inflammatory conditions caused by bacterial dysbiosis
- Helps improve intestinal health
- Contributes to improving the integrity of the intestinal mucosa
- It helps to prevent the main pathologies of the gastroenteric tract.
- It improves the intestinal absorption of nutrients thanks to intact intestinal villi and able to perform their function at their best.

HOW TO USE IT

From 30 to 70 gr/day depending on the indications of our technical service.

WHAT IT CONTAINS

MICROENCAPSULATED FUMARIC ACID, MICROENCAPSULATED ORTHOPHOSPHOTIC ACID
MICROENCAPSULATED MALIC ACID, MICROENCAPSULATED LACTIC ACID
MICROENCAPSULATED CITRIC ACID.

LIFE for **“SPECIFIC NUTRITION”**.

Help the herd by acting in different districts in order to have a quick response in case of respiratory flu, enteric diseases or mammary problems. Essential in supporting the herd to bring it back to high levels of efficiency and well-being.

BENEFITS PROVIDED

- Helps the animal in case of flu by supporting the animal's appetite
- Help the pet during times of stress!
- Contributes to maintaining correct intestinal eubiosis
- Speeds up post-flu recovery
- Increases the frequency of watering and meals, ensuring an increase in rumination

HOW TO USE IT

From 50 to 150 gr/day depending on the indications of our technical service.

WHAT IS IT

Complementary feed for cattle, **“SPECIFIC NUTRITION”** line thanks to the effect of natural components it helps to contain problems during rest stops, reduce losses and improve performance.

BENEFITS PROVIDED

- Helps improve performance during times of stress
- Improves nutrient ingestion and conversion with ICA benefits
- Helps the animal reduce oxidative stress

HOW TO USE IT

200 gr/head during the restocking phase for at least 30 days.

WHAT IT CONTAINS

It contains Filipendula Ulmaria and Boswellia as well as other botanical extracts defined that contribute to improving the health of the animal. Se and Vit. E have a powerful antioxidant action.

WHAT IS IT

LIFE for **VIEW NUTRITION**.

Complete supplement for the entire dry phase. Designed to have a predetermined DCAD so as to contain the diseases that arise from hypocalcemia and hyperpotassemia; another fundamental contribution to the diet is the contribution of vitamins and chelated trace elements of first choice. A determining integrated factor is the content of additives designed to promote post-partum ingestion which contribute to reducing metabolic disorders in the pre-partum period.

BENEFITS PROVIDED

- Meets the needs of the cow by providing trace elements and vitamins with very high bioavailability.
- Helps contain hypocalcemia in the pre- and post-partum phase
- Reduces Potassium related problems.
- Increases ingestion.
- Contributes to reducing clinical and subclinical ketosis and consequently the resulting hepatic steatosis
- Is formulated to protect the nutrients it contains thanks to agents with anti-oxidant and anti-peroxidant action.

HOW TO USE IT

200 to 300 g/head for the duration of the dry.

WHAT IT CONTAINS

Nutricab® Calcium chloride microencapsulated to ensure optimal product palatability. Organic Se and Vit E.

WHAT IS IT

LIFE for **“TIMED NUTRITION”**.

LIFE BOOSTER is a product created specifically for the pre-parturition period, to be administered two-three weeks before the presumed calving date.

LIFE BOOSTER contains sub-clinical hypocalcemia, increases intake and supports liver metabolism during this critical phase for dairy cattle.

BENEFITS PROVIDED

- Helps contain hypocalcemia and hyperpotassemia
- Helps reduce the frequency of retained placenta
- Helps the liver metabolize lipids by containing ketosis and hepatic steatosis
- Increases ingestion and averts negative energy balance
- Helps reduce metabolic disorders in pre-birth

HOW TO USE IT

From 100 to 200 gr/head during the PRE-BIRTH phase.

WHAT IT CONTAINS

Nutricab®, Levucell^{sc}, Byorizae, Kessent, Xtract Ruminant®.

WHAT IS IT

LIFE for **“SHIELD NUTRITION”**.

Hepatoprotector, detoxifying, designed to defatigate the liver work. Recommended in case of food transitions, stress, contaminated foods (eg. from mycotoxins). Ideal also for highly productive animals or groups to contain steatosis and support the hepatic metabolism.

BENEFITS PROVIDED

- Choline RP, associated with betaine, has an important antichetogenic and antisteatotic protective function at the hepatic level.
- Increases ingestion and improves liver function
- Improves the health of intestinal villi thanks to MOS.
- Contains liver damage caused by endotoxemia of food or ruminal origin in case of alterations in fermentation and release of endotoxins
- In case of clinical or subclinical ketosis it helps to alleviate liver suffering and related pathologies.

HOW TO USE IT

From 100 to 200 gr/head per day depending on milk production and rationing.
Follow the indications of our technical service.

WHAT IS IT

LIFE for “**FIRST STEP NUTRITION**”.

The best supplementation for heifers and heifers up to the sixth month of pregnancy. Often products are proposed for the integration of heifers rich in salts and buffers that are rarely needed in highly fibrous rations.

From this consideration was born HEIFERLIFE TOP, a concentrated supplement with everything you need for a healthy and fast growth, with a very competitive daily incidence, thanks to its concentration and dosage.

BENEFITS PROVIDED

- Contains MOS (Mannan Oligo-Saccharides) for intestinal health.
- Contains WPC (Whey Protein) that guarantees a supply of protein with very high biological value, rich in essential Aa that promote the muscular-skeletal growth of the animal and the fetus
- They contribute to improving health
- Rich in highly bioavailable vitamins and trace elements.
- Ensures an excellent intake even during the first phase of pregnancy

HOW TO USE IT

80 to 150 g/head from weaning until the sixth month of pregnancy.

www.nutrizionelife.com

WHAT IT CONTAINS

β -glucans are able to adsorb and then bind mycotoxins, contain the growth of viruses and bacteria stimulating the immuno-competence of calves. Mannans, of which D-mannose is the most important monosaccharide, and β -glucans arrive intact to the intestine of animals and are able to perform biological functions very interesting for intestinal health. Many bacteria, some of which are involved in enteric diseases of calves, such as Coli, Klebsiella spp, Serratia spp and Yersinia spp at the end of their "filaments" present proteins called "adhesins" to adhere to the intestinal epithelium. The D-mannose of MOS has a high affinity towards these bacterial adhesins so it exerts a deactivation role by binding the pathogens. MOS have also a positive action towards the immune system, an antioxidant action and in general they improve the integrity of the intestinal mucosa. MOS, moreover, have been shown to be a growth factor of Bifidobacterium, whose clinical importance in intestinal health is evidenced by the large number of studies on the positive contribution that it makes in the intestinal biome.

WHAT IS IT

Life for **“INCREMENTAL NUTRITION.”**

BENEFITS APPROVED

Dedicated supplementation to:

- increase total milk proteins and caseins
- increase the efficiency of protein metabolism by decreasing the waste of nitrogenous bases
- improve fertility by lowering free urea in blood
- lower the nitrogenous bases excreted in the environment

Milk quality you are not satisfied with?

Our technical staff in two simple steps is able to balance “in grams” the contribution of Methionine and Lysine in order to maintain a correct 3:1 ratio of these two limiting amino acids.

In dairy cattle diets it is increasingly necessary to do tailoring work to create a product dedicated to the herd.

Don't rely on chance!

The investigation to see if everything is properly balanced consists of three steps:

1. Sampling of the ration given to the animals
2. Laboratory analysis by aminogram
3. Imbalance correction

EMAIL

ADDRESS:

life@lifeteamsrl.it

Expected results result in increased protein and casein within a few weeks.

How?

Increase in protein and casein with the same amount of milk produced or increase in milk production with a consequent increase in the protein produced.

The response to this correction provides, therefore, an expected increase in grams of protein expressed by our cows.

In addition to the qualitative-quantitative improvement, due to a greater “digestibility” of the protein in the ration, there is a general improvement in health and performance due mainly to a lower “waste” of nitrogen fractions that can cause inflammation of different degrees.

NITROLIFE

**INCREMENTAL NUTRITION
MICROENCAPSULATED MODULAR RELEASE UREA**

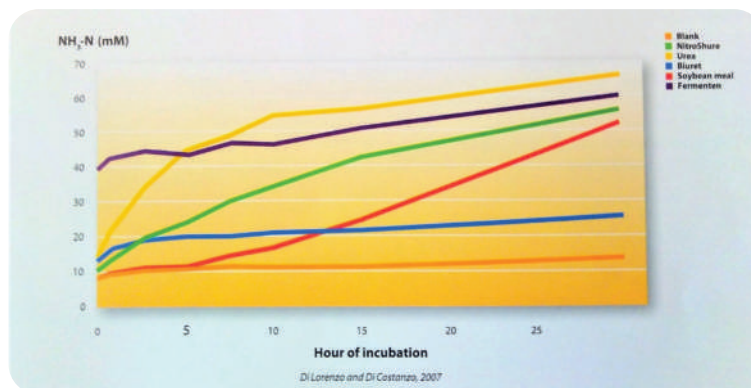

WHAT IS IT

LIFE for **“INCREMENTAL NUTRITION”**.

Modular-release microencapsulated urea that adapts to carbohydrate fermentations in the rumen, thereby maintaining a stable ruminal pH.

BENEFITS APPROVED

- Controlled release allows for a greater proportion of N when it is needed, i.e., when the energy provided by carbohydrate fermentation in the rumen requires it. This allows for greater microbial protein synthesis and reduces ruminal pH fluctuations.
- Higher microbial protein production allows for a greater proportion of by-pass protein of very high biological value, ideal for cattle.
- Increases milk production.
- Reduces pH fluctuations in the rumen, reducing the phenomena related to subclinical acidosis, increases the degradability of the fiber.
- It increases the ingestion and the fat content in the milk.

HOW TO USE IT

From 50 to 100 gr/day depending on the indications of our technical service.

Studied to cover at 360° the needs of the cow promoting its potentialities

L.I.F.E. for **VIEW NUTRITION.**

Complete supplement for the whole dry phase. In addition to providing vitamins and trace elements chelates of high quality, is designed to have a predetermined DCAD so as to contain the problems related to hypocalcemia and hyperpotassemia. It also contains additives to stimulate post-natal ingestion and the immune system.

how does it work?

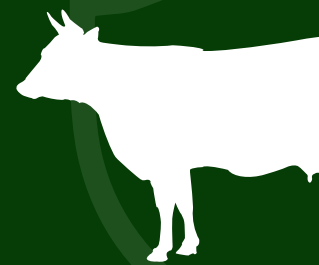

Thanks to the intrinsic properties of Choline by pass, a strong hepato-protective action is realized in the containment and protection of the liver from hepatic steatosis, an economically demanding and metabolically disastrous event; in case of NEB, even momentary, the lipomobilization for energy purposes is massive and therefore thanks to this particular formulation the onset of clinical/subclinical ketosis is counteracted.

A high contribution of minerals and vitamins is provided to the cow with important benefits for the immune system, fetal growth and the constitution of a valid immune system of the mother and the calf.

Some macroelements are involved as cofactors in more than 300 enzymatic pathways supporting energy synthesis, immunity and proper recovery of ovarian function in virtue of new postpartum pregnancies. The metabolism of carbohydrates, fats and proteins is therefore supported.

La particolare costituzione anionica permette una mobilitazione di calcio coerente alle future produzioni di latte alle quali la vacca in asciutta andrà incontro che sommate all'azione della Vit. D coprono totalmente le necessità di avere un calcio endogeno circolante senza avere una diminuzione dei recettori di calcio responsabili delle principali patologie parto/post parto: parto languido, vitelli ipovitali, collasso puerperale, ritenzioni di placenta, endometriti, rallentato transito intestinale etc.

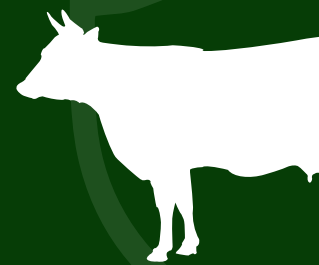

The product is also balanced from the point of view of amino acid by virtue of the needs of each herd implementing the efficiency of the ration by decreasing waste and free nitrogen from this arising, with general benefit of the physiology of the cow, beta glucans then increase the ruminal efficiency first and then intestinal making visible the synergistic effect of this particular formula.

Powerful preparation based on extracts botanically defined.

The summation effect of the anti-inflammatory principles of these plants allows to increase their effects avoiding the gastrolesive effects typical of acetylsalicylic acid (Aspirin).

Mechanism of action:

**Eliminates inflammation in all body districts
of the animal especially respiratory and digestive tracts**

**At the level of the respiratory tract they have
an excellent expectorant effect**

**Greatly reduce the release of histamine
fighting aphinal inflammation**

**Reflexive decongestant action thanks to
increased blood fluidity**

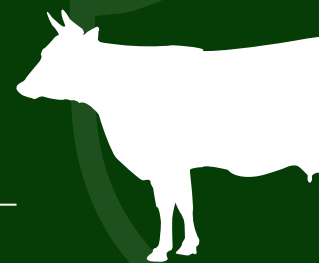

**They promote a diuretic effect aimed at the elimination
of metabolic toxins of inflammatory origin**

WHEN TO USE IT?

Flu forms

Gastrointestinal forms

**In peripartum to contain
fever and inappetence**

**In cattle for restocking to support the animal's
appetite and contain STRESS**

It promotes a virtuous circle in the energy economy of dairy cattle.
Thanks to the presence of Eugenol and Cinnamaldehyde we obtain this cascade effect

**Decrease in the activity of methane-forming bacteria
(-840 Kg of methane/year)**

**Substances not used by methanogens are more easily
converted into more easily into propionate and to a small
extent into butyrate**

**The immediate consequence is an increase in
fat and daily milk production**

The effect is finally completed thanks to the effect of Capsaicin that increases the ruminal efficiency by stimulating the watering and the frequency of feeding in the manger, a phenomenon that exercises the rumen and makes more digestible the ingesta of the cow.

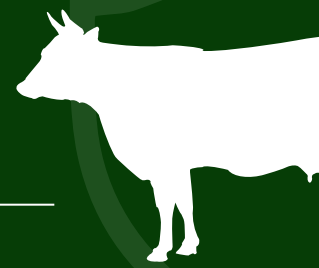

It goes without saying that the increase of rumination acts is accompanied by an increase of chewing acts with a general increase in the production of saliva and salivary buffers with a consequent defense from events such as acidosis.

**Immune nutrition is your first ally.
Complementary feed
for high performance cattle for fattening**

INDICATED IN CASE OF:

Increased mortality

Decreased production performance

**Immune support and appetite
post traumatic stress**

Flu and gastrointestinal forms

**Sourcing of animals from pasture areas
to eliminate endo/ecto parasites**

**Powerful preparation based on plants with anti-
inflammatory and antipyretic action.**

**FILIPENDULA
ULMARIA**

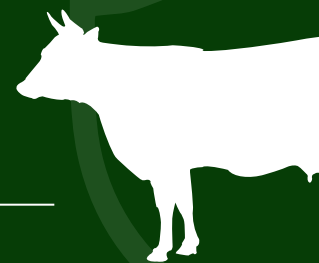

**BOSWELLIA
SERRATA**

**ARTEMISIA

The summation effect of the anti-inflammatory principles of these plants allows to increase their effects avoiding the gastrolesive drawback typical of acetylsalicylic acid (Aspirin).

Mechanism of action:

Eliminates inflammation in all parts of the animal's body, particularly the respiratory and digestive tracts.
respiratory and digestive tracts

Thanks to mucilage, a protective and soothing barrier against inflammation is formed in the gastrointestinal tract

Excellent pulmonary expectorant effect

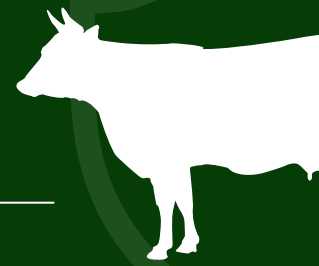

Reduced histamine release to combat aphinal inflammation

Reflexive decongestant action due to increased blood fluidity

The markedly represented limonoids have a powerful action against the most common infestations such as coccidia, mites, Neospora and nematodes

It improves the digestive and intake effect of nutrients with increase of ICA

SALESFORCE IMMUNOLIFE

IMMUNE NUTRITION

The integration of trace elements and minerals has been designed specifically to support the entire immune system by promoting its development and increasing its activity:

Zn promotes the absorption of Vit. A and B complex; stimulates the antibody activity, lymphocytes and macrophages

Mg has a buffering action at intestinal level

Cu protects against infection and increases tissue protection/repair

Mn stimulates innate immunity by corroborating the antiviral activity of the immune system

If and Vit. E in addition to stimulating the production of antibodies and resistance to infection protect the membranes of immune and non-immune cells from stress of oxygen free radicals (ROS)

The preparation allows to fully increase the immune activity, the absorption of vitamins, minerals and active ingredients thanks to the particular action on the intestine and the defense of the respiratory tract.

Complementary feed for cattle for fattening high performance

HOW DOES IT WORK?

The preparation contains enzymes with prebiotic action that break down malt into glucose, feeding the yeasts already present and concretizing their benefits by preventing dangerous dysbiosis of the digestive tract. The preparation contains enzymes with prebiotic action that break down malt into glucose, feeding the yeasts already present and concretizing their benefits by preventing dangerous dysbiosis of the digestive tract.

The mix of botanically active extracts prepares the intestine for proper absorption by protecting the epithelium of absorption par excellence, the intestinal villi. In this sense, this particular formulation aims to maximize the bioavailability and therefore the weight of our animals

Strong buffering power to avoid unpleasant inconveniences at pre-maccharide level such as ruminal parachatosis and ruminitis.

The vitamin mix is designed specifically for:

Increase protein synthesis
at the muscle level

Optimal utilization of the
carbohydrates present
in the diet

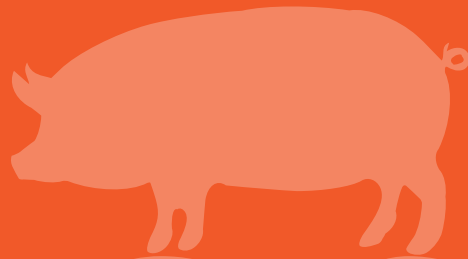

Better skeletal growth
thanks to an optimal
absorption of calcium in
the intestine

Protection of tissues
from inflammation and
oxidative damage

Positive effects on the
immune system

WHAT IS IT

MAXI PROFIT PIG optimizes the growth performance of lactating piglets and their survival rate by minimizing the use of antibiotics.

MAXI PROFIT PIG is a product destined to the integration of the feed of lactating sows strategic for the quality of the ovules of the next ovulation.

BENEFITS APPROVED

- A reduction in piglet mortality of 70-80%.
- A lower rate of mobilization of sow body reserves.
- At weaning, piglets will weigh more, be very vigorous and healthy.
- We will have more homogeneous piglets with less underweight.
- Increased number and quality of eggs at the next ovulation.

HOW TO USE IT

Supplement your lactation feed at a dose of 0.2%.

WHAT IT CONTAINS

Dried yeast from *Saccharomyces Cerevisiae*, treated Silicon Dioxide, Plant extracts belonging to the Lythraceae, Mimosaceae, Acanthaceae, Apocinaceae families, Colloidal Silica.

WHAT IS IT

EMBRIO PLUS 30 è un prodotto creato con tutte le nuove conoscenze e il know-how relativo ai fabbisogni che la specie suina deve sopperire nei primi 30 giorni di gestazione per lo sviluppo degli embrioni.

EMBRIO PLUS è stato ideato per massimizzare e ottimizzare i risultati ottenibili dalle genetiche iperprolifiche

BENEFITS APPROVED

- Increase the average weight of piglets at birth and consequently that at weaning.
- Increase the number of piglets weaned per birth.
- Reduces the number of underweight piglets at birth.
- Reduces the mortality rate in the sub-prophase.

HOW TO USE IT

Supplementing your gestation feed from cover and for the first 30 days of gestation at a dose of 1.25%.

WHAT IT CONTAINS

Chabasite, Lithotamnion, plant extracts of Lythraceae, Mimosaceae, Acanthaceae, Apocinaceae, essential amino acids.

FATTENING

*SUPPLEMENTS FOR SELF-PRODUCTION
OF FATTENING FEED*

WHAT IS IT

Products formulated to guarantee feed producers the certainty of obtaining feed capable of meeting the needs of their pigs during the fattening phase.

These supplements already include the best available on the international market today to optimize growth performance and to avoid the use of antibiotics.

BENEFITS APPROVED

- Optimization of the food conversion index
- Maintenance of growth homogeneity
- Reduced risk of diarrhea
- Perfect balance of amino acid needs
- Creation of a balanced and stable microbiota
- High possibility of nutrients digestion and assimilation

HOW TO USE IT

The range of supplements intended for the production of feed for fattening consists of a series of products starting from a percentage of inclusion of 1% up to products to be used at 5% that allow the production of all feed for the fattening stage from start-up to finishing.

WHAT IT CONTAINS

Vitamins, Trace elements, Amino acids, Acidifiers, Appetizers, Enzymes, Dried yeast from *Saccharomyces Cerevisiae*, Prebiotics, Salts.

REPRODUCERS

SUPPLEMENTS FOR THE SELF-PRODUCTION

SOW FEED

WHAT IS IT

Products formulated to ensure self-producers of feed the certainty of obtaining feed able to meet the needs of their breeders in all the different phases of the production cycle of the sow.

These supplements include the best available on the international market today to optimize fertility performance, prolificacy, and milk production.

BENEFITS APPROVED

- Improvement of piglet birth weight
- Increase in piglets born alive at birth
- Reduced risk of neonatal diarrhea
- Perfect balance of amino acid needs
- Creation of a balanced and stable microbiota
- Increased fertility rate
- Reduction of lameness

HOW TO USE IT

The range of supplements intended for the production of feed for sows is composed of a series of products starting from a 1% inclusion rate up to products to be used at 5%. The breeding line is composed of products specifically destined to the gestation phase and those aimed exclusively at the lactation phase.

WHAT IT CONTAINS

Vitamins, Trace elements, Amino acids, Acidifying agents, Enzymes, Dried yeast from *Saccharomyces Cerevisiae*, Prebiotics, Salts.

www.nutrizionelife.com

WHAT IS IT

Complete supplement, “**PRECISION FEEDING**” line, conceived to integrate at best, herds with high productions and to guarantee the best results. The product pays particular attention to the prevention of contamination due to mycotoxins (MOS and specific captants), to intestinal health and ruminal efficiency. Selenium chelate, Vitamins and specific antioxidants promote improved fertility and increased PR.

BENEFITS APPROVED

ENABLES the competitive development of positive intestinal flora.

DECREASES the hydrolysis time of fiber and starch derivatives, with increased AGV and microbial biomass due to a studied enzymatic pool of amyl/cellulosolic enzymes.

The MOS (mannan oligosaccharides) complex/saturate the bacterial adhesion systems mimicking the effect of intestinal adhesion; in this way the bacteria bind to them without damaging and propagating between the villi.

The **BENEFICIAL FLORA** can colonize the intestinal environment without having to compete with the negative flora, thus creating a biological “wall” against pathogens further aided by a lowering of the pH.

Decreased action of methanogens; energy is more easily converted to propionate.

The immediate consequence is an increase in fat and daily milk production.

Strong watering stimulus and feeding frequency, a phenomenon that exercises the rumen, makes the cow's ingesta more digestible and increases the buffering effect of saliva.

Protected choline protects the liver from steatosis and assists the metabolism of methionine further strengthened by the ad hoc balance made by inserting the best protected methionine for a correct and proactive amino acid balance to support the production of protein in milk.

Vitamins and minerals complete the needs of high performance cows by strengthening immunity, protecting the animal from inflammatory, oxidative and productive stress.

HOW TO USE IT

From 500 to 600 gr/head to best integrate high performance cattle

WHAT IT CONTAINS

XTRACT® Combination of microencapsulated natural active substances to improve ruminal efficiency. Availa® metal-amino acid complex that ensures maximum bi-availability. Levucell® Highly concentrated and titrated live yeast. Inactivated yeast from saccharomyces cerevisiae, contains sub-acidosis and promotes the efficiency of ruminal fibrolytic flora, increasing tmpone effect and microbial protein synthesis.

WHAT IS IT

Product of excellence action to improve resistance to high level of thl. Against heat stress in cows. It combines a buffering and rehydrating effect with a strong anti-inflammatory action, stimulates ingestion and improves feed efficiency herps.

BENEFITS PROVIDED

- The RP choline, associated with betaine, plays an important function antichetogenic and antisteatogenic at the hepatic level.
- Increases ingestion and improves liver function
- Maintains ingestion and supports milk production.
- Increases drinking frequency due to enteric vaso-active properties.

HOW TO USE IT

From 100 to 200 gr/day depending on the degree of stress and the THI value. Follow the indications of our technical service.

Technological Additives:

E 330 Citric acid (1a) 50.000 mg

E 321 Butylhydroxytoluene (BHT) 23 mg

E 420 Sorbitol (from fruit) 48.500,00 mg

Organoleptic Additives Appetite stimulant - flavouring

Usage

Veals: For the first 10 days of life, 30g-50g per head at each meal in addition to the milk. After, 150g per head at each meal diluted in 2 liters of water at 35 degrees Celcius for 1-3 days as substitute for milk.

Package: Bag 10 Kg

Expiry Date: 2 years from the manufacturing date.

Benefits

- Hydralife is a complementary feed based on hydro / lysodispersible ingredients and integrated with Vitamin C and intestinal absorbents.
- Hydralife is in powder and should be administered in warm liquid feed.
- Hydralife contributes to the prevention of feeding and environmental enteric problems typical of young calves.
- Hydralife improves immune status.
- Hydralife avoids dehydration due to diarrheal phenomena.

Storage

- Store in a dry place and avoid direct sunlight

Expiry Date: 2 years from the manufacturing date.

Benefits

- Improves dry-matter intake, milk yield and feed efficiency.
- Helps rumen flora to use lactate in the rumen, reduces the risk of acidosis and modulate rumen pH, improves milk quantity and overall quality.
- Improves feeding behavior and animal health.

Storage

- Store in a dry place and avoid direct sunlight

LIFE AVITRIB

FOR ANIMAL CONSUMPTION ONLY

Poultry feed additives

Each 1 Kg contains:

Tribut dry	350.000 mg
Sodium formate	100.000 mg
Silica	150.000 mg
Citric acids E330	100.000 mg
Lactic acid E270	8.000 mg
Malic acid E296	7.000 mg
Fumaric acid 1a297	11.000 mg
Calcium carbonate up to	1000 g/1 Kg

Dosage

- For Poultry, Turkeys, broilers and Layers: 0,5-1% /T of feed

Package: Bag 25 Kg

Expiry Date: 2 years from the manufacturing date.

Complementary feed for calves to be used as milk replacers

Each 1 Kg contains:

Sodium Chloride	160.000 mg
Sodium Sulphate	60.000 mg
Dicalcium Phosphate	60.000 mg
Sodium Bicarbonate	50.000 mg
Magnesium Oxide	30.000 mg
Thiamine monoidrate Vit. B1	100 mg
Riboflavin Vit. B2	160 mg
Pyridoxine hydrochloride Vit B6	100 mg
Cyanocobalamin Vit. B12	2 mg
Menadion sodium bisolf. Vit K3	52 mg
Niacinamide	2.000 mg
Vitamin A retynil acetate	400.000 U.I.
Vitamin D3	50.000 U.I
Vitamin E acetate	1.500 mg
Choline chloride	5.580 mg
Live yeast CNCM-4b 1711	1.000 mg
Zinc Oxide	4.000 mg
Copper sulphate	175 mg
Manganese oxide	2.400 mg
Potassium Iodide	2 mg
Selenomethionine Hydroxide (Selisseo)	0,1 mg
Calcium Carbonate and Wheat bran	Up to 1 Kg

Usage

Improves the DMI and feeding efficiency, health and performance.

Dosage

- For fattening calves, use 100 g per 100 kg of live weight, up to 300 g /head /day.

Package: Bag 25 Kg

Expiry Date: 2 years from the manufacturing date.

Benefits

- Creates a favorable pH for cellulolytic bacteria in the rumen.
- Reduces the risk of rumen acidosis, improves performance & feed efficiency.
- Stimulates general health by improving Calcium/Phosphorous balance in feeding.
- Good absorption.
- Higher feed conversion efficiency.

Storage

- Store in a dry place and avoid direct sunlight

Premix of feed additives

Each 1 Kg contains:

Vit A. Retinyl Palmitate	2.000.000 U.I.
Vit. D3	500.000 U.I.
Vit. E Acetate	10.000 mg
Culture of Aspergillus Oryzae e Niger	10.000 mg
Saccharomyce Cerevisae Cell Wal	250.000 mg
Inactive dry yeast (Sacch. Cerevisae)	260.000 mg
Calcium soap from cod liver oil and salmon *	200.000 mg
EPA (C20:5 omega 3)	9.000 mg
DHA (C22:6 omega 3)	25.000 mg
Beta-carothene	500 mg
Selenio-methionine S.C. I-3399	10 mg

Usage

Use 15-20 days before calving and the first days of lactation (30-40 days) to improve fertility and health.

Dosage

- For Cows, Camels, Buffalos, Sheep and Goats: 100-150 g/head/day or 1-1,5%/T of feed

Package: Bag 25 Kg

Expiry Date: 2 years from the manufacturing date.

Benefits

- Stimulates the synthesis of fertility hormones.
- Improves embryonal and foetal development.
- Preventive action against follicular cysts
- Improves DMI in dairy transition period.
- Reduces metabolic stress factors and fever hypocalcemia
- Improves the overall health of the animal

Storage

- Store in a dry place and avoid direct sunlight
