## WHAT IS IT

LIFE for “**SPECIFIC NUTRITION**”.

Complete supplementation for heifers and heifers up to the sixth month of pregnancy.

## BENEFITS PROVIDED

- Contains MOS (mannan oligosaccharides) with protective action of the intestinal mucosa.
- Ensures an excellent intake from the earliest stages of pregnancy.

## HOW TO USE IT

100 to 250 g/head from weaning until the sixth month of pregnancy.

## WHAT IT CONTAINS

$\beta$ -glucans are able to adsorb and therefore bind mycotoxins, viruses and bacteria and have the ability to improve the health of calves already during intrauterine life. Mannano oligosaccharides (MOS) among which the most important monosaccharide is D-mannose and  $\beta$ -glucans arrive intact in the intestine of the animals that ingest them and are able to carry out very interesting biological functions for intestinal health. Many bacteria, some of which are involved in enteric diseases of calves, such as E. Coli, Klebsiella spp. , Serratia spp. and Yersinia spp. at the end of their “filaments” they present proteins called “adhesins” to adhere to the intestinal epithelium. The D-mannose of MOS has a high affinity towards bacterial adhesins which helps to

improve the response against pathogens. MOS also have a positive action against intestinal eubiosis, an antioxidant action and generally improve the integrity of the intestinal mucosa. MOS have proven to be a growth factor of bifidobacterium, whose clinical importance in the health of the intestinal biome is demonstrated by the large amount of studies conducted.
