WHAT IS IT

Complete supplement, “**PRECISION FEEDING**” line, conceived to integrate at best, herds with high productions and to guarantee the best results. The product pays particular attention to the prevention of contamination due to mycotoxins (MOS and specific captants), to intestinal health and ruminal efficiency. Selenium chelate, Vitamins and specific antioxidants promote improved fertility and increased PR.

BENEFITS APPROVED

ENABLES the competitive development of positive intestinal flora.

DECREASES the hydrolysis time of fiber and starch derivatives, with increased AGV and microbial biomass due to a studied enzymatic pool of amyl/cellulosolic enzymes.

The MOS (mannan oligosaccharides) complex/saturate the bacterial adhesion systems mimicking the effect of intestinal adhesion; in this way the bacteria bind to them without damaging and propagating between the villi.

The **BENEFICIAL FLORA** can colonize the intestinal environment without having to compete with the negative flora, thus creating a biological “wall” against pathogens further aided by a lowering of the pH.

Decreased action of methanogens; energy is more easily converted to propionate.

The immediate consequence is an increase in fat and daily milk production.

Strong watering stimulus and feeding frequency, a phenomenon that exercises the rumen, makes the cow's ingesta more digestible and increases the buffering effect of saliva.

Protected choline protects the liver from steatosis and assists the metabolism of methionine further strengthened by the ad hoc balance made by inserting the best protected methionine for a correct and proactive amino acid balance to support the production of protein in milk.

Vitamins and minerals complete the needs of high performance cows by strengthening immunity, protecting the animal from inflammatory, oxidative and productive stress.

HOW TO USE IT

From 500 to 600 gr/head to best integrate high performance cattle

WHAT IT CONTAINS

XTRACT® Combination of microencapsulated natural active substances to improve ruminal efficiency. Availa® metal-amino acid complex that ensures maximum bi-availability. Levucell® Highly concentrated and titrated live yeast. Inactivated yeast from *saccharomyces cerevisiae*, contains sub-acidosis and promotes the efficiency of ruminal fibrolytic flora, increasing tmpone effect and microbial protein synthesis.
